

In the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Claims 1-6 (Cancelled)

7. (Currently amended) A liquid crystal display comprising:

a pair of substrates which oppose each other with a liquid crystal layer therebetween;

a light source provided on an exterior of one of the substrates; and

a transfective layer comprising at least an organic film and a metallic reflection film disposed on ~~[[an]]~~ a portion of the inner face of one of the substrates, the portion excluding a periphery of the substrate[;];

an overcoat film, planarizing the metallic reflection film, and covering an edge of the organic film and a portion of the excluded periphery; and

wherein a plurality of concave portions are contiguously formed on a surface of the organic film, an inner surface of each concave portion constituting a part of a spherical surface,

wherein a depth of the concave portions is in the range of 0.1 to 3 μm , an inclination angle of the inner surface of each concave portion is in the range of -30 degrees to +30 degrees, and a pitch of adjoining concave portions is in the range of 5 to 50 μm .

8. (Currently amended) A liquid crystal display comprising:

a pair of substrates which oppose each other with a liquid crystal layer therebetween;

a light source provided on an exterior of one of the substrates; and

a translector comprising at least a resin base applied to an exterior surface of the substrate adjacent to the light source, and a metallic reflection film disposed on an ~~outer face of one of the substrates~~ the resin base[:];

wherein a plurality of concave portions are contiguously formed on a surface of the resin base, an inner surface of each concave portion constituting a part of a spherical surface,

wherein a depth of the concave portions is in the range of 0.1 to 3 μm , an inclination angle of the inner surface of each concave portion is in the range of -30 degrees to +30 degrees, and a pitch of adjoining concave portions is in the range of 5 to 50 μm .

9. (Previously presented) A liquid crystal display according to Claim 8, wherein the metallic reflection film has a thickness of 80 to 500 Å.
